Customer Distribution Across Churn Segments

High Churn Customers by Region

Customer Volume vs Churn Risk by Customer Segment

Churn Risk vs Partner Potential - High Churn Customers

Customer_Type ● Residential ● Small Business

Key Insight:

High customer shows a smaller but important share of the customer base, whereas the risk is shown in specific regions within the largest customer segment and the highest customer with the stronger partner Potential should be priority for retention involvement.

Ticket Status Breakdown

Average Resolution Time by Priority

Disputed Bills by Month

Escalated Tickets by Channel

Key Insight:

Certain types of complaints have more operational problems associated with them than others (e.g., billing disputes, high amounts of bills) thus putting additional customer pressure on the company. Therefore, management should put more priority on resolving high priority cases more quickly and providing more closely monitored billing dispute resolutions in order to reduce churn resulting from service.

Campaign Conversion Funnel

Contract Base by Status

Renewable Partner Pipeline

Estimated Output by Installation Type

Expected vs Actual Energy Output

Key Insight:

Campaign response indicates if outreach is converting into action, whilst contract status gives an indication of commercial stability. The renewable partner pipeline/envisaged output indicates potential future growth and production trends indicate if the anticipated energy outcome has been achieved as expected.
